FiberFlex®

We work where you work.

FiberFlex® is a unique, long-lasting commercial and industrial flooring solution that works in the harshest environments. Designed with safety and durability in mind, we work where you work – with heavy equipment, with any chemicals, oil or grease, in any temperature.

Durable beyond belief

Originally used in secondary containment ponds and truck bed liners, the materials used in FiberFlex® provide unparalleled durability. We are so certain of our resilience that we offer a 20-year warranty.

Easy installation, easy maintenance

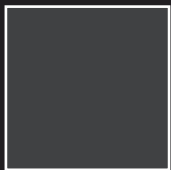

FiberFlex® flooring is easy to install, much like installing sheet vinyl. Since we are the only manufacturers of this one-of-a-kind product, we require certification to ensure you are comfortable with installation. FiberFlex® is also easily cleaned with water, any cleaning product and deck brush or commercial cleaning machine.

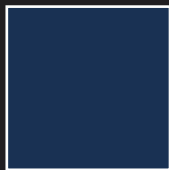

Waterproof, chemical-resistant, microbe resistant, fireproof

Resistant to water, most chemicals, microbes – and with an extra coating – FiberFlex® is even fireproof! It also is not harmed by grease, automotive chemicals, animal fats, or boiling water.

CUSTOMIZATION – YOU CHOOSE:

- AMOUNT OF SLIP-RESISTANCE
- ANY RAL K5 COLOR CODE

Lightning-fast return-to-service

Light duty return to service in 1 - 4 hours. Full service return in 24 hours.

Safety is our top priority

Slip-resistance is embedded in all our products, to protect against costly and damaging slip-and-fall accidents. The amount of aggregate is adjustable, depending on the need. If you are walking on it with metal cleats in dugouts, we increase the aggregate. If you install it on a deck or around a pool, we decrease the aggregate.

Peel-and-stick - for even easier installation

Our peel-and-stick backing offers a faster, easier and less expensive installation alternative to two-part adhesive. This innovative approach provides a flooring solution designed to support a range of rigorous tasks. The reduced installation time enables less downtime for customers. Contact us to determine if this alternative will work for you.

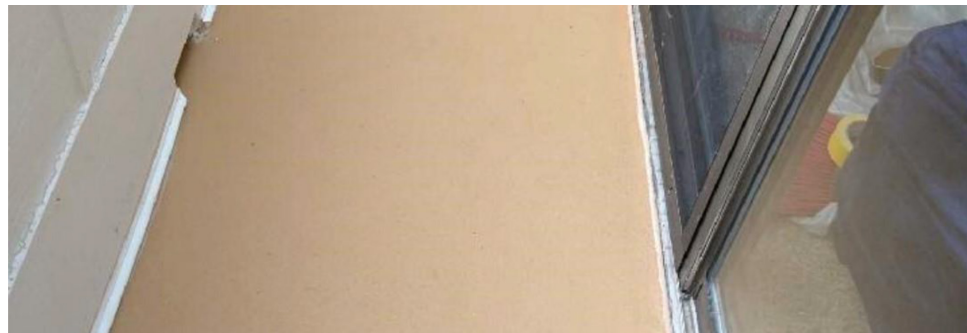

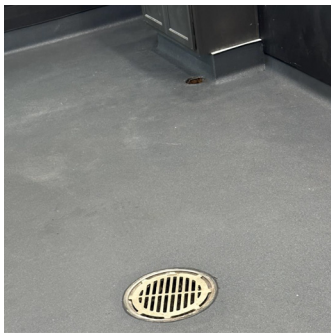

Restaurants & Cafeterias

FiberFlex® provides a safe, resilient solution for commercial kitchen floors. FiberFlex® also goes up the walls – all the way to the ceiling, preventing oil, spices, and food particle damage. Alternatively, FiberFlex® can go up the walls 4” – 6” from the base to prevent dirt and grime from becoming embedded in crevices.

FiberFlex® is also resistant to fire, chemicals, mildew and growth, and will not absorb stains, odors and fluids. These contaminants can easily enter grout lines, causing difficult and extensive cleaning and/or health department inspection issues.

Applications: coolers and freezers, entryways, kitchens and food preparation areas, back offices, restrooms, service hallways and many more

Retail

FiberFlex® provides long-lasting durability. We also offer new options – FiberFlex® stair treads and safety lines! Additionally, FiberFlex® comes in any RAL K5 color code to match your corporate branding.

Applications: warehouses, breakrooms, entryways, service hallways, storage areas, restrooms and many more

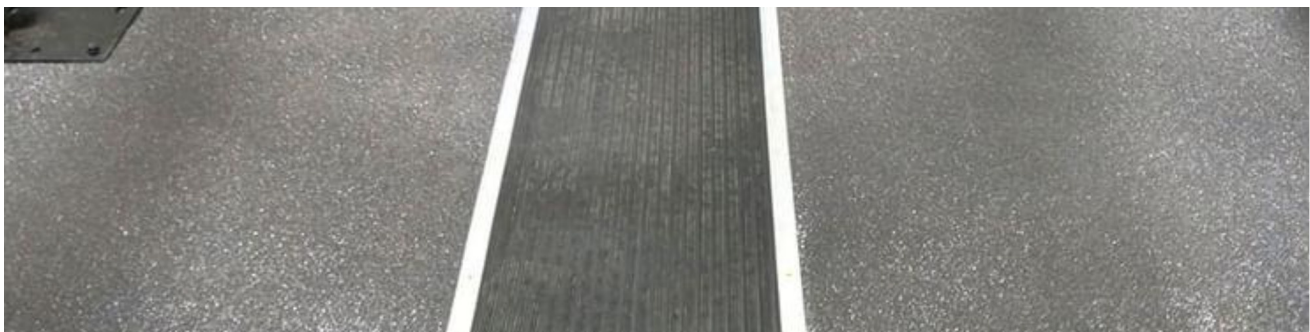

Automotive Dealerships & Repair Centers

Automotive dealerships and repair centers require flooring solutions that can handle heavy equipment maneuvering and constant cleaning of fluids that stain average flooring.

FiberFlex® easily handles a variety of weight loads and resists grease, stains, odors and harsh fluids. Its unique construction also resists impacts and punctures and handles constant cleaning of harsh fluids.

Applications: showrooms, garages, repair areas, break rooms, restrooms, storage areas and many more

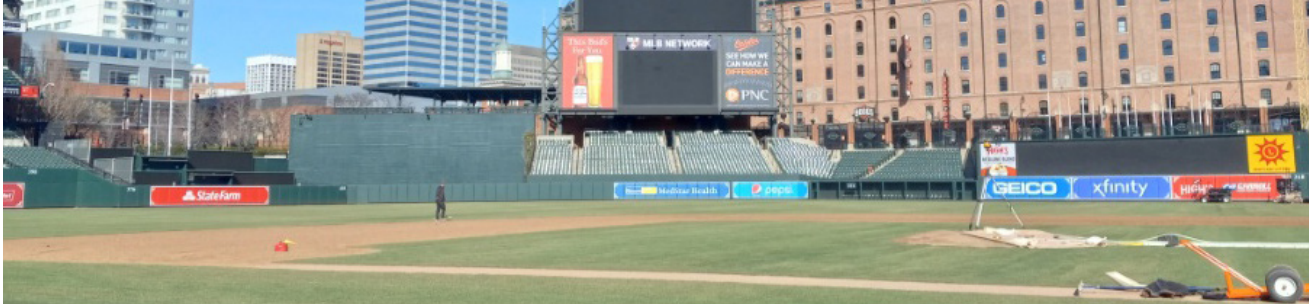

Schools & Churches

Schools and churches need flooring that provide safe walking surfaces while withstanding heavy traffic. FiberFlex® provides the ultimate solution for children and adults through the highest level of coefficient of friction available today. It is the best replacement for highly polished surfaces common in education.

FiberFlex® stair treads provide the same level of protection for stairways, helping to prevent slips and falls as students race to and from classes. Further, it is a cost-effective option that comes with a 20-year warranty – designed for durability.

Applications: multi-purpose areas, breakrooms, kitchen, restrooms, entryways, stairways and many more

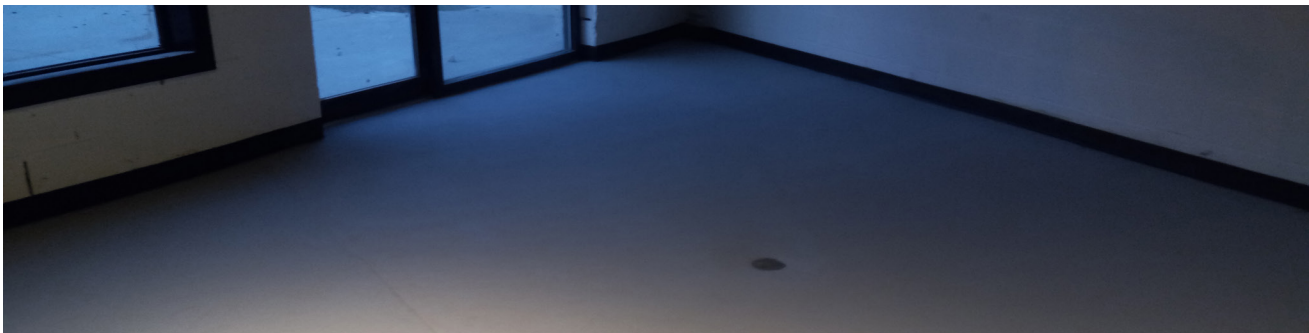

Stadiums & Sports Facilities

FiberFlex® is the best choice for heavy traffic areas. It's designed for durability, so it easily handles extensive use by students and professional athletes. It is so strong that metal cleats do not harm it.

FiberFlex's slip-resistance and impact resistance helps protect sports enthusiasts as they practice and perform. Easy to apply and easy to clean, FiberFlex® provides functional flooring options that work – where you work or play.

Applications: ballparks, concert areas, concession stands, ice arenas, locker rooms, multi-purpose areas, restrooms, stairways and many more

Healthcare & Senior Living

FiberFlex® withstands the needs of healthcare and senior living facilities by providing safe flooring that is specially treated to resist chemicals and microbes combined with superior slip-resistance to help prevent slip-and-fall incidents that can occur in heavily polished flooring facilities.

For senior living facilities, this challenge is especially important. To ensure the best slip-and-fall protection, WorldProof can customize slip-resistance for different areas in these facilities. You may want a lesser amount of slip-resistance in a rehabilitation facility and greater slip-resistance in an area prone to excess water, such as entryways, exterior walkways or restrooms. FiberFlex® also offers durable protection against heavy rolling loads, and it resists chemicals, stains, odors, fluids and bacteria.

Applications: laboratories, nursing stations, exam rooms, operating rooms, cafeterias and many more

Animal Care

Just as it does with children and adults, FiberFlex® protects pets from slipping and falling on highly polished surfaces. It provides a safe solution for animal day care, veterinary facilities and dog grooming facilities alike.

Whether you are opening a new facility or remodeling an existing one, FiberFlex® offers fast return-to-service. You can walk on it in one hour, and return to full service in 24 hours.

Applications: animal shelters, exam rooms, grooming facilities, pet day-care facilities, pet training centers, kennels, veterinary clinics and many more

Marine

FiberFlex® provides UV stability, slip-resistance, and countless options in colors and color combinations. Unlike other options, our flooring solution helps prevent accidents resulting from standing water. FiberFlex® greatly exceeds OSHA and ADA coefficient of friction both with and without standing water.

Designed for indoor and outdoor applications, FiberFlex® will not fade under constant sun and high temperatures. Originally used in secondary containment ponds, the materials used in FiberFlex® protect against water issues. It is a long-lasting flooring solution that will never require painting, resurfacing, resealing or recaulking.

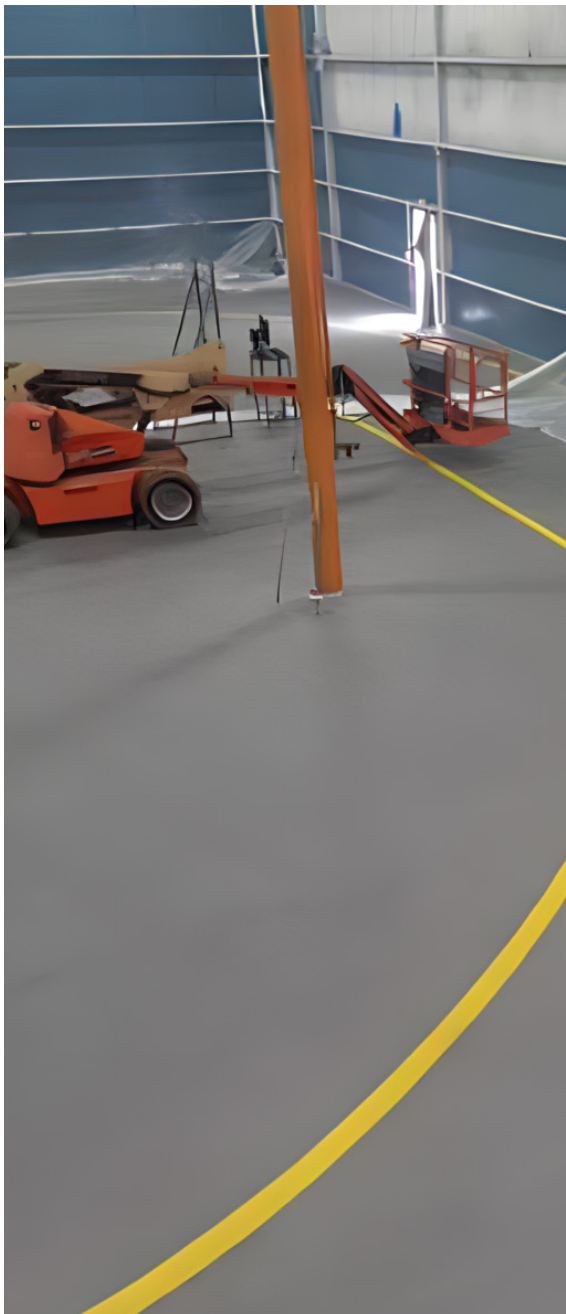

Applications: boats, yachts, cruise ships, docks, decks, patios, pool surrounds and many more

Manufacturing & Warehouses

Manufacturing demands tough impact-resistant flooring for heavy traffic areas, heavy loads, and moving heavy machinery. Our flooring easily holds up to constant heavy traffic from automated machinery and forklifts. It also provides chemical resistance, is very easy to clean and features fast return-to-service. These hard-working floors offer high slip-resistance to protect staff and operators from slips, trips and falls.

Applications: factories, distribution centers, production facilities, plants and many more

INDUSTRIAL

Safety Yellow Striping

One of our primary offerings is safety yellow striping – a product no other manufacturer offers! Our safety yellow lines replace faded, cracked, chipped yellow painted lines and they are warranted for three years. With appropriate installation and maintenance, they should last five years.

Safety yellow lines are installed by one of three methods, depending on traffic:

Heavy traffic areas
- Embedded -

High traffic areas
- Grinded or Shot-blasted -

General and low-level traffic
- Direct Application -

WorldProof's Safety Flooring product line offers several durable solutions:

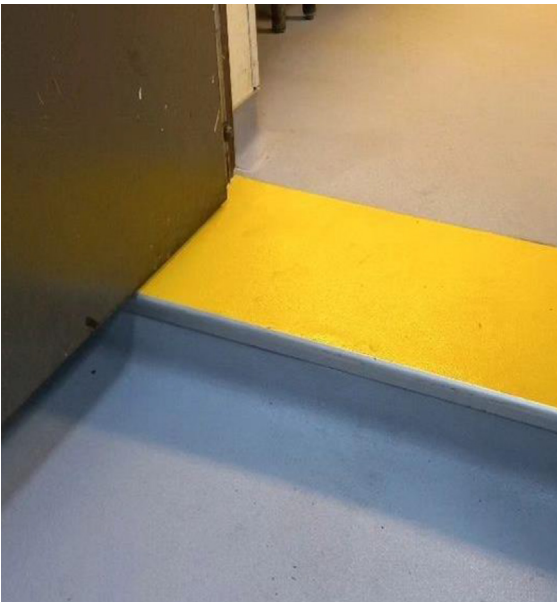

Safety Striping: Glue-down
available in sizes from 4 in to 12 ft wide

Safety Striping: Peel-and-stick
available in sizes from 4 in to 7 ft wide

Safety Flooring for walkways:
available in sizes from 4 ft to 12 ft wide

Safety Flooring for restrooms, entryways
and other areas prone to slips and falls

SAFETY FLOORING

Custom Options

WorldProof easily and readily creates the flooring you need, manufactured to your specifications - we work where you work!

Our custom options include:

- Matching any RAL K5 color code
- 12' x 25' rolls or custom sizes of 6', 8', 10' x 25' - up to 50'
- Aggregate (slip-resistance) in greater or lesser amounts, as desired
- Stair treads for added slip-resistance
- FiberFlex® Comfort for a more cushioned foot feel
- FiberFlex® cove caps that exactly match FiberFlex® flooring custom or existing colors
